PROJECTS

Decentralized Blockchain Voting System

Oct 2025 – Dec 2025

Solidity, React, Ethers.js, Hardhat, Tailwind

- Developed a tamper-proof voting application consisting of a robust Solidity smart contract backend and a responsive React frontend.
- Implemented secure voting logic in the smart contract to ensure one-vote-per-address and prevent double-voting or unauthorized access.
- Integrated Metamask/Ethers.js for seamless wallet connection and blockchain interaction, providing users with a transparent, decentralized experience.
- Utilized Hardhat for local development, testing, and deployment of contracts to ensure high reliability and security of the voting process.
- Designed a user-friendly interface with Tailwind CSS to display real-time voting results and candidate details fetched directly from the blockchain.

QR + Face Recognition Attendance System

July 2025 – Nov 2025

React Native, React, Node.js, MongoDB, AWS

- Developed a unified full-stack system featuring a student-facing mobile app (React Native) and a teacher web portal.
- Integrated AWS Rekognition to perform biometric verification against images stored in AWS S3, effectively eliminating attendance fraud.
- Architected a secure QR Code rotation algorithm with backend validation to prevent "proxy" attendance via screenshots.
- Managed global application state using Zustand and handled complex multi-part form data/image uploads with Multer.

EDUCATION

B.Tech in Computer Science

2022 – 2026

Sarvajanik College of Eng. & Tech.
Surat, Gujarat

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Solidity, SQL, Java

Frontend: React, Tailwind CSS, Shadcn/UI, HTML/CSS

Backend: Node.js, Express, REST APIs, WebSockets, JWT

Blockchain: Ethers.js, Hardhat, Smart Contracts (ERC-20), Metamask

Database: MongoDB (Mongoose), MySQL

Cloud & Tools: AWS (Rekognition, S3), Vercel, Git
